

The 2010 Top 200 International Design Firms and The Top 150 Global Design Firms

July 26, 2010

The financial woes of the past two years has hit the global construction market. The U.S. market remains in recession, and the worrisome debt burdens of several European countries and the weakness of the Euro have left many large international design firms struggling. However, not all is doom and gloom as many regions around the globe have provided bright spots for some large designers.

THE TOP 200 INTERNATIONAL DESIGN FIRMS

Global recession has taken its toll, but some bright spots remain

The financial woes of the past two years has hit the global construction market. The U.S. market remains in recession, and the worrisome debt burdens of several European countries and the weakness of the Euro have left many large international design firms struggling.

However, not all is doom and gloom as many regions around the

globe have provided bright spots for some large designers.

The impact of the hard times can be seen in the survey results for the ENR Top 200 International Design Firms list. The Top 200 as a group generated \$52.45 billion in design revenue in 2009 from projects outside their respective home countries, a drop of 0.3% from 2008's \$52.62 billion in design revenue. However, the Top 200's domestic design revenue saw a significant 7.4% falloff in design revenue in 2009 to \$59.37 billion from \$64.14 billion in 2008. So, overall, the Top 200's total design revenue dropped to \$111.81 billion in 2009 from \$116.76 billion in 2008, down 4.2%.

Despite the sluggish market, a few regions showed strength. The biggest winner was North Africa, where design revenue for the Top 200 jumped 34.9% in 2009. Design revenue from projects in Latin America rose 21.7% in 2009. Central and southern Africa rose 5%, while the Asian market crept up 1.5%.

The European market, the largest design market among the Top 200, took the biggest hit, falling 7.1% in 2009. Interna-

tional design revenue from projects in Canada felt the impact of falling oil prices on some of the huge oil-sands work, falling 4.3%. International design revenue in the Middle East was down 0.3%, and in the U.S. it was down 0.5%.

Global Uncertainties Abound

Major design firms are adjusting to changes following the credit crisis and ballooning public debt. A flight to quality in services characterizes their strategies. "Public spending is down ... transportation and water are still OK. But when you get into urban planning and municipal projects, [opportunities] are pretty much dried up," says Bertrand van Ee, CEO of Netherlands-based DHV Group.

Global economic problems have raised many financial concerns beyond just soft markets. "Exchange rates and trade protectionism" are major concerns for large design firms, says Chen JiHua, manager of international business development for China Chengda Engineering Co. "The volatility of currencies is an issue at present, and it's important to structure multi-currency contracts to immunize the risk

without having to necessarily enter into expensive and temporary hedging," says Barry Norman, managing director, international, for Australia's SMEC.

The financial health of clients in troubled times is another concern. "The recession has also increased the focus on not only winning work but also ensuring the business gets paid during the course of the project," says Keith Reynolds, CEO of Beca Group Ltd., New Zealand.

Many firms now worry government work may be affected by public debt concerns. "The global economic crisis is now entering into a new phase: a debt crisis," in which the public sector may reduce its spending significantly, says Flemming Bliigaard Pedersen, Group CEO, Ramboll, Denmark.

"Countries within the [European Economic Community] all are or will take harsh measures to reduce their budget deficits, resulting in lower public spending and less for the consumer to spend and thus less private investments," says Ton van der Velden, a board member at Netherlands-based Tebodin Consultants & Engineers.

Some design firms worry that the continuing economic problems in Europe and the U.S. may affect the design market in developing countries, which have continued to be active. "The truth is that we have yet to see any significant slowdown in Asia or Africa. It may well be coming as European and North American donor/capital investment countries redirect money to their own economies," says Norman. But he has yet to see any project postponements or a drop in tenders.

Executives at some design firms believe the global market has hit bottom and is poised for a turnaround. "While the impacts of the [global financial crisis] in the U.K. and Dubai have been substantial, global revenues were down by some 10% at the height of the economic recession," says Paul Douglas, CEO of Australia's Sinclair Knight Merz. However, he believes the industry is through the worst of it. "The prospects for long-lead-time major projects in the mining sectors remain positive, and demand in the power, energy

and transport sectors in developing countries is strong," he says.

On the other hand, many design firm executives worry that there may be more trouble ahead. Beca Group is "wary of a potential double-dip recession and the impact of investor confidence in large-scale capital projects," says Reynolds.

But some companies say that, even if there is a double-dip recession, design firms will be better prepared this time around. Many international design firms were hurt because of "excessive expectations" from the early boom market, says Yundong Kim, general manager, overseas business department, Hyundai Engineering Co., Korea. If there is a double-dip recession, "the crisis [among design firms] won't happen since people are ready to cope with it," he says.

Many design firms say there are numerous countries in which the market is thriving. "South Africa, Australia, Brazil, Chile, India and the Middle East offer terrific opportunities for international design firms," says Kurt Strobele, CEO of Hatch Group, Canada. He is concerned about "countries that have little or no respect for the rule of law" as they pose risks for clients.

"For us, the regions that offered the most opportunity for business growth were Africa, the Middle East, southern Asia and central Asian republics," says Ross Hitt, CEO of SMEC.

Europe's financial turmoil, both from the 2008 financial crisis and the current national debt worries, has forced cutbacks at many firms. Boosted by stimulus packages, last year 60% to 70% of Netherlands-based DHV's European business was public sector. Nevertheless, the firm cut 5% of its staff. Further, van Ee expects more cuts in Europe but growth in other regions.

Public-sector business will be "seriously difficult" especially in the U.K. and Ireland, adds Richard Williams, development director at London-based Mott MacDonald Group. "The most challenging are the regions facing a shrinking economy—western and central Europe," says van der Velden of Tebodin.

With 70% of its business in the U.K., W.S. Atkins plc. is exposed to government cuts at home, yet it has improved margins while shrinking sales, says CEO Keith Clarke.

Big public-sector spending cuts by the U.K. government are "well received by business," says Arup Chairman Philip Dilley. But the private-sector recovery will not likely fill the gap, he fears.

Still, there are some major public projects in Europe. Ramboll has seen top-line growth and solid profit margins in the Nordic countries due to several significant projects, says Pedersen. One is the design of a tunnel project under Fehmarnbelt, connecting Denmark and Germany. "This tunnel will be the longest combined road-and-rail tunnel in the world if this project is realized." Ramboll also is working on a new signaling system for the 3,000-km railway network in Denmark.

Denmark's COWI A/S has remained stable, says CEO Lars-Peter Søbye. London-based Arup Group is "fairly stable," adds Dilley. U.K.-based Halcrow Group grew sales and profits last year, mainly in Australia, Asia, Latin America and India. But it cut around 10% of staff, says CEO Peter Gammie. Globally, "we are seeing a slowdown in decision-making."

Strategies

Last year, "you already started to see the difference between [Asian markets] ... compared with Europe," says van Ee. A "long-term correction" is coming, he believes. "The only real advantage Europe has ... is knowledge and innovation. Our focus will shift to innovation and research and development," he adds.

Going upmarket figures in Atkins's strategy. "The only way to survive is to be able to invest and stay at the higher end," says Clarke. "We are not going to chase work for the sake of volume."

COWI plans to stay big by increasing its market share. Its strategy since 2006 has been to settle in key regions, focusing on a handful of sectors in which it ranks itself among the world's top five players, says Søbye.

Halcrow will be "more proactive" in

advising clients on saving money, says Gammie. Mott has not made large redundancies, "and we don't plan to," says Williams. The relative weakness of the British currency "helps considerably" to export skills, says Dilley.

Hyundai Engineering Co. is continuing its strategy to expand into the construction side of the business. Most Korean engineer-constructors started as contractors, says Kim. He believes that Hyundai can parlay its engineering and management skills to more effectively provide full-range engineering-procurement-construction services.

The market downturn has exposed some firms as poorly run and has made owners wary of the reliability of design firms. "Customers want certainty, and they want to trust that the company they do business with will be around also tomorrow and that it has a full understanding of their needs," says Pedersen.

Atkins's target sectors include renewable energy, while "nuclear new build is coming very quickly," says Clarke. Further, the burgeoning interest in the "decarbonization of society" represents a large market. Energy and climate-change work is also in COWI's sights.

Another firm upbeat about the power market is Sweden's ÅF. "We currently see large opportunities in the Middle East, East Europe and Russia," mostly in conventional thermal plants, says Eero Auranen, president, ÅF Energy Division. However, he also is optimistic about the nuclear market, citing plants in Finland, Switzerland, Brazil and Sweden that are in the pre-design or design phase.

Prospects in the oil-and-gas and commodities sectors are "clearly very strong," says Williams. Gammie sees great potential in energy and mining. Railroad opportunities are "just about everywhere."

Bright Spot in Asia

Regionally, van Ee reports growing demand in a market curving from South Africa, through the Middle East, India, Malaysia and Indonesia, then to Australia. "The underlying demographics and associated strong economic growth of the

Asia-Pacific region point to a sustained period of demand for engineering design services,” says Reynolds.

“There are good opportunities in the transport, energy and resources, and water sectors” in China, Oceania and North

America, says Ian Shepherd, CEO of GHD Pty Ltd., Australia. He says GHD’s local capabilities and understanding of the business environments of the regions are keys to GHD’s success.

For Arup, Asia is “flourishing,” says

Dilley. “We’re doing incredibly well in Hong Kong with infrastructure projects.” Arup remains active in China in building design and infrastructure planning.

With around 150 people in China, Mott is also present, but it is “very difficult” to make money, says Williams. Philippe Citroën, managing director of France’s SYSTRA, notes that China has its own technical strength through its design institutes, making it a tough market for foreign firms. “China has been disappointing due largely to lack of access to markets,” says Hitt of SMEC.

Large railroad investments are making Hong Kong a “very strong” market, says Halcrow’s Gammie. Atkins’s Clarke agrees, adding that the territory’s complex projects play to his firm’s strengths.

For China Chengda Engineering, Southeast Asia, southern Asia and the Middle East remain the strongest markets. “Chinese companies are competitive ones in these markets,” says Chen.

With rising fee levels, India “is going to be a key part of our strategy,” says Gammie. “You can’t ignore it,” adds Mott’s Williams. “It’s a very vast market and rich in term of people.”

The Middle Eastern market is recovering slowly, and Atkins is moving deeper into infrastructure, says Clarke. Regional workload, adds COWI’s Søbbye, “has definitely slowed down ... but there are still jobs in building, energy, climate change and transportation.”

The rebound in fuel prices is powering new work. “With the price of oil stabilizing above \$ 70/barrel, all the Gulf countries have set ambitious investment programs that will have a positive repercussion on the design market in the near future,” says Kosti Sefri, area director in Lebanon for ACE International.

In Latin America, opportunities abound in Argentina, Brazil, Chile and Venezuela, says Gammie. SYSTRA also has its eyes on Latin America. One of the projects it is tracking is the proposed 322-mile Rio de Janeiro-São Paulo high-speed-rail project, says Citroën.

Douglas of SKW is excited about South America. “The mining sectors within

Chile, Peru and Brazil continue to drive our business in the region,” he says, citing SKM’s acquisition of Chile’s Minmetal as a major turning point for the firm.

Stirrings of Work in Africa

Africa has shown selective strength for international designers. Relatively free from the banking crisis, Africa is experiencing 6% to 7% economic growth, creating business, says Søbye.

North Africa has provided many large infrastructure projects for international firms. For example, “Algeria, Morocco and Tunisia are good places for working on mass transit and railways,” says Citroën of SYSTRA. The firm currently is working on the Kenitra-Tangier high-speed-rail project.

There are opportunities in central and southern Africa. For example, Ramboll has delivered about 500 mobile telecom towers in Ghana, Nigeria and Gabon to telecom solutions provider Shenzhen, China-based Huawei Technologies Co. Further, the two companies recently signed a new five-year framework agreement for as many as 900 more towers this year in both central and southern Africa, says Pedersen.

Globalization has had many positive aspects on the international design profession. “The ongoing globalization process has had a positive effect on the international design industry since it has helped

to standardize not only design criteria but also business practices,” says Sefri of ACE.

However, a global economy also means

the impact from regional financial difficulties will ripple around the globe, requiring designers to be ready to respond. “We’ve always been willing to climb on a

EXCLUDING \$4.0 MILLION FROM ANTARCTIC/ARCTIC

plane. Twenty years ago it was clear to us it was time to retire the word ‘foreign,’” says Strobele of Hatch.

Not everyone will flourish in these difficult times. A willingness to work hard to find opportunities is a key, sources say. “The international market remains patchy and will remain so for some time to come. This underpins our long-term view that only the strongest, with the most diverse skills and geography, will ultimately survive,” Douglas concludes. ■

Global Slowdown

The international design market is feeling the impact of the global financial woes of the last two years, which can be seen from the results of ENR's Top International survey. **ENR's Top 200 International Design Firms earned \$52.45 billion in design revenue in 2009 from projects outside their home countries**, a decline of 0.3% from the \$52.62 billion they earned in 2008. Total design revenue for the Top 200 fell 4.2% in 2009 to \$111.81 billion.

Hits Designers

HOW TO USE THE TABLES

COMPANIES are ranked according to revenue for design services performed in 2009 in \$ millions (*). Those with subsidiaries are indicated by (†). For information on subsidiaries and where each firm worked outside of the U.S., see www.enr.com. **Firms not ranked last year. Some markets may not add up to 100% due to omission of "other" miscellaneous market category and rounding. **NA**-Not available.

KEY TO TYPE OF FIRM **A**-architect; **E**-engineer; **EC**-engineer-contractor; **AE**-architect-engineer; **EA**-engineer-architect; **ENV**-environmental; **GE**-geotechnical engineer; **L**-landscape architect; **P**-planner; **O**-other. Other combinations possible. Firms classified themselves.

GENERAL BUILDING includes commercial buildings,

offices, stores, educational facilities, government buildings, hospitals, medical facilities, hotels, apartments, housing, etc.

MANUFACTURING includes auto, electronic assembly, textile plants, etc.

POWER comprises thermal and hydroelectric powerplants, waste-to-energy plants, transmission lines, substations, cogeneration plants, etc.

WATER SUPPLY includes dams, reservoirs, transmission pipelines, distribution mains, irrigation canals, desalination and potability treatment plants, pumping stations, etc.

SEWERAGE/SOLID WASTE includes sanitary and storm sewers, treatment plants, pumping plants, incinerators, industrial waste facilities, etc.

INDUSTRIAL PROCESS includes pulp and paper mills, steel mills, nonferrous metal refineries, pharmaceutical plants, chemical plants, food and other processing plants, etc.

PETROLEUM comprises refineries, petrochemical plants, offshore facilities, pipelines, etc.

TRANSPORTATION includes airports, bridges, roads, canals, locks, dredging, marine facilities, piers, railroads, tunnels, etc.

HAZARDOUS WASTE includes chemical and nuclear waste treatment, asbestos and lead abatement, etc.

TELECOMMUNICATIONS includes transmission lines and cabling, towers and antennae, data centers, etc.

Even Megafirms

The international design market rapidly is becoming dominated by multidisciplinary megafirms. Despite soft markets, some are growing through mergers and acquisitions around the globe. Among ENR's Top 150 Global Design Firms, there are 32 design firms with a total design revenue of more than \$1 billion each in 2009. However, size is no protection against a falling market, as the 16 largest designers on the ENR Top 150 Global list all saw a decline in design revenue between 2008 and 2009.

HOW TO USE THE TABLES

COMPANIES are ranked according to revenue for design services performed in 2009 in \$ millions (*). Those firms with subsidiaries are indicated by (†). For information on subsidiaries and where each firm worked outside of the U.S., see www.enr.com. **Firms not ranked last year. Some markets may not add up to 100% due to omission of "other" miscellaneous market category and rounding. **NA**-Not available.

KEY TO TYPE OF FIRM A-architect; E-engineer; EC-engineer-contractor; AE-architect-engineer; EA-engineer-architect; ENV-environmental; G-geotechnical engineer; L-landscape architect; P-planner; O-other. Other combinations possible. Firms classified themselves.

GENERAL BUILDING includes commercial buildings,

offices, stores, educational facilities, government buildings, hospitals, medical facilities, hotels, apartments, housing, etc.

MANUFACTURING includes auto, electronic assembly, textile plants, etc.

POWER includes thermal and hydroelectric powerplants, waste-to-energy plants, transmission lines, substations, cogeneration plants, etc.

WATER SUPPLY includes dams, reservoirs, transmission pipelines, distribution mains, irrigation canals, desalination and potability treatment plants, pumping stations, etc.

SEWERAGE/SOLID WASTE comprises sanitary and storm sewers, treatment plants, pumping plants, incinerators, industrial waste facilities, etc.

INDUSTRIAL PROCESS includes pulp and paper mills, steel mills, nonferrous metal refineries, pharmaceutical plants, chemical plants, food and other processing plants, etc.

PETROLEUM includes refineries, petrochemical plants, offshore facilities, pipelines, etc.

TRANSPORTATION includes airports, bridges, roads, canals, locks, dredging, marine facilities, piers, railroads, tunnels, etc.

HAZARDOUS WASTE includes chemical and nuclear waste treatment, asbestos and lead abatement, etc.

TELECOMMUNICATIONS comprises transmission lines and cabling, towers and antennae, data centers, etc.
